### Setup

2. Setup

Execute:

```
codecept bootstrap
```

This creates configuration file `codeception.yml` and `tests` directory and default test suites. Acceptance, functional, unit test suites are created as well.

See Demo

## 6. Run!

Tests are executed with 'run' command

```
codecept run --steps
```

This will execute our Welcome test with **PhpBrowser**. It's PHP script that can check HTML page contents, click links, fill forms, and submit POST and GET requests. For more complex tests that require a browser use Selenium with **WebDriver** module.

```
